

Intelligent Shipping Technology Test Laboratory ISTLAB

1.

The basis for the ISTLAB project is the digitalization and general expansion of the automation and intelligence of shipping.

remote piloting
smart waterways
smart ports
remotely operated and autonomous ships

2.

The aim of the project is to create a smart joint-use Intelligent Shipping Technology test Laboratory

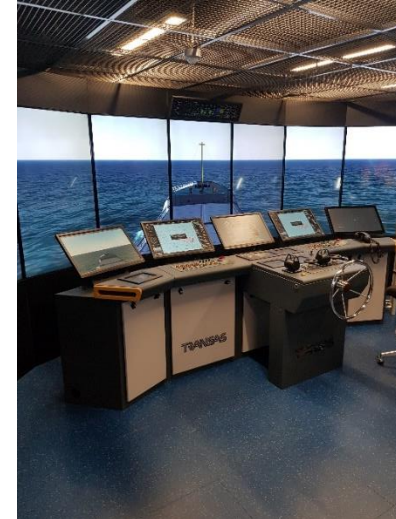

navigation simulator
accuracy and repeatability of satellite positioning
sea current and wave monitoring
bathymetric model of fairway
smart buoy

3.

The ISTLAB project will provide a unique testing and research platform

ISTLAB
